

## ENSURE INTEROPERABILITY AND ENABLE DESIGN REUSE

### CHALLENGE

- Keep the consistency between the heterogeneous representations of a system
- In a context of exponential increase of documentation, ensure that all your product content is documented and validated as early as possible in the system lifecycle and avoid having documentation late or out of sync with respect to the design flow

### BENEFITS

- Strict consistency across all the representations of a system: captures the platform once in IP-XACT standard format, and generates all of its different representations
- Fast deployment ensured thanks to standard [More...]

### SOLUTIONS

Magillem platform, derived from IP reuse methodology, solves the challenge of keeping the consistency across various representations of a system by automating the generation of all the system representations from a single source.
